

LOGAN WARD

☎ 319-327-1226 ✉ ldward@iastate.edu 🔗 linkedin.com/in/logan-d-ward/ 📍 Cedar Rapids, Iowa

Objective

Senior in Electrical Engineering specializing in hardware design and system performance, with experience benchmarking AI inference workloads and analyzing memory and compute efficiency. Interested in applying these skills toward hardware development, digital design, and high-performance systems.

Experience

Sandisk

May 2026 – Aug 2026

Systems Design Engineer Intern

Milpitas, California

- Conducted MLPerf Storage benchmarking for AI Training, KV Cache, and VectorDB workloads, evaluating SSD behavior under representative AI training, inference, and retrieval access patterns.
- Analyzed storage throughput, latency, accelerator utilization, and Recall@10 metrics to identify bottlenecks impacting AI workload performance.
- Investigated filesystem and I/O path tradeoffs across ext4 and XFS configurations, quantifying effects on KV Cache latency and throughput.
- Evaluated SSD-backed vector search using DiskANN and HNSW, characterizing storage-performance implications for Retrieval-Augmented Generation (RAG) applications.
- Delivered baseline AI storage performance metrics and technical recommendations to support future SSD product design and benchmarking initiatives.

Burns & McDonnell

May 2025 - Aug 2025

Electrical Engineering Intern

Kansas City, Missouri

- Assisted in the design and drafting of electrical systems for airports, military bases, and federal facilities, including power distribution, lighting, and communication systems.
- Utilized software tools to create and update electrical layout drawings, one-line diagrams, and panel board schedules.
- Performed load calculations and equipment sizing for various projects utilizing relevant codes (UFC, NEC, NFPA).
- Assisted in the preparation of an electrical design package for a cross-functional intern project using software tools, supporting one-line diagram drafting, breaker sizing, and circuit routing.

The Weitz Company

May 2024 - Aug 2024

Project Engineer Intern

West Des Moines, Iowa

- Supported the construction and development of an AI data center by assisting project engineers with scheduling, documentation, and field coordination.
- Responsible for pricing, quoting, and implementing automated entrance gates at jobsite from start to finish in a timely manner and within budget.
- Learned how to manage subcontractors on a large scale.
- Analyzed IFC drawings for all disciplines within the project.

Education

Iowa State University

Expected May 2027

Bachelor of Science in Electrical Engineering; GPA: 3.67

Ames, Iowa

Coursework: Digital VLSI Design, Integrated Electronics, Digital Logic, Automatic Control Systems, Embedded Systems

Technical Skills

Languages: C++, Python, Verilog, MATLAB

Developer Tools: Cadence Virtuoso, Code Composer Studio, LTSpice, Quartus Prime, ModelSim, QuestaSim, VS Code

Lab Tools: Oscilloscope, ILA, Power Supply, Multimeter, Waveform Generator
